

This is a primary care optometry service for patients who are suspected, by their optometrist or GP, of developing non-acute glaucoma.

What happens at the appointment?

The optometrist will discuss your eye history, symptoms, risk factors and any medical history. You should take your spectacles and a list of your current medication to the appointment.

The optometrist will look at the front and back of your eye and perform several checks. To enable them to repeat the eye pressure check, they will put an eye drop in your eye to numb the surface of the eye, this then enables them to use a small instrument to gently touch the front of the eye. This test is more accurate than the air puff pressure check you may have already had.

What happens after the test?

- You will be found to not have glaucoma, nor be at risk of developing glaucoma in the foreseeable future and be discharged back to the care of your own optometrist, or
- You will be found to have a diagnosis or suspicion of glaucoma and will be referred to the Manchester Royal Eye Hospital for further assessment.

How do I book an appointment with the service?

You will need to contact one of the optometrists on the list overleaf to arrange an appointment for Glaucoma Enhanced Referral Service, alternatively your GP may have referred you to one of the participating optometrists located close to your home, please ask your GP whether they have done this.

Contact info@gmpec.co.uk if you require further information regarding this service.
